Github : <https://github.com/Rhyanz46>  
Address : Sumbawa Besar, Nusa Tenggara Barat,  
Indonesia

---

## About Me :

My passion is to learn a whole technology in the Backend Engineer world. Currently, I have a strong ability to design, build, and maintain the server-side of web applications, which means I can build the backend services from scratch until it's deployed. Not only that, but I can also work in the Frontend field.

I have a strong understanding and proficiency in using the framework and programming languages such as Fastapi, Golang, Javascript and I can write some simple systems using Vue.js.

Now, I'm currently learning the technology in software architecture like Microservices, Event-Driven, and so on. And I love to learn new technology.

---

## Core Skills :

- Golang
- FastAPI
- Flask
- Django
- Mysql, PostgreSQL
- Linux
- Docker
- DevOps

## Interest :

- Networking
  - Rust/C++
  - Microservice
-

## **Educations :**

### **1. 2013 - 2016 ( SMK N Plampang ) Finish**

My last project is building Web Apps about Hospital Information and I got grand 3 champion

### **2. 2016 - 2018 ( Universitas Bumigora ) Not Finish**

*S1- Computer Science*

I attended Universitas Bumigora until the 5th semester, where I majored in Information Technology. I had to drop out due to time constraints, as I was focused on work that was located "on site".

---

## **Experiences ( Almost 5 years ) :**

### **1. Feb 2018 - Feb 2019 ( 1 yr 1 mo ) - Fulltime - CV.Lumbung Inovasi ( Frontend Developer )**

Building Web Applications that provide information about Village Information, my responsibility is to consume API from Backend and make it visualization to a Charts, Table, Maps, make structure for my components and so on.

Tools : Google Maps API · Vue.js

### **2. Feb 2019 - Mar 2020 ( 1 yr 2 mos ) - Fulltime - PT.Netzen Media Akses ( Backend Engineer )**

Design system and make service based on RestAPI for boat booking Apps, make accounting app for internal needs.

Tools : Google API · Facebook API · Midtrans API · Xendit API · Google Cloud Platform (GCP) · Redis · Flask

### **3. Jun 2021 - Feb 2022 ( 9 Month ) - Fulltime - Foxlogger ( Backend Engineer )**

My responsibility is to Design and implement a warehouse stock sistem + e-commerce API service, maintain the API service that already exists, Setup CI/ CD Server and make a gitlab pipeline for the whole staging server. work closely with the CTO.

Tools : Gorilla mux · Scylla DB · Continuous Integration and Continuous Delivery (CI/CD) · MySQL · docker · Google Cloud Platform (GCP) · Go (Programming Language)

### **4. Nov 2021 - Oktober 2022 ( 1 yr ) - Xetia.io - Part Time ( Backend Developer )**

My responsibility is Design and Implementing Delivery Service, Integrate with other internal service, Integrate with external delivery service using plugin pattern, Maintenance ChattingService. work closely with the CEO and CTO.

Tools : Django REST Framework · WebSocket · Redis · Microservices · RPC · RabbitMQ · FastAPI, Golang, Postgresql

5. Juni 2022 - Present ( 1 yr ) - Fulltime - Lintasarta ( Backend Engineer )

Developed the Dekarock server cluster using OpenShift and created a 'voucher' feature for free access to cloud resources like VPN, Virtual Machine, Object Storage and more. I also optimized existing endpoints to improve performance, collaborating with the Tech Lead and QnA tester for successful implementation.

Tools : Golang · PostgreSQL · Openstack API · Vue.js · AWX Project · Redis · Elasticsearch
